Brief Write-Up about the Project:

"Environmentally Sound Methods for Recovery of Metals from Printed Circuit Boards – Phase II" a MeitY sponsored project aimed to develop environmentally friendly process methodologies for the cost effective recovery of precious metals and to establish pilot plant facilities to demonstrate the process technology. This work involves both pyro and hydrometallurgical processes and the application of environmental principles. Technologies are developed to handle the hazardous vapors evolved during the process such as bromine, dioxins, furans, cadmium. Processing equipments are designed and fabricated indigenously for handling and treating the hazardous flue gases and effluents. Metallurgists, chemical engineers, mechanical engineers and chemists can contribute a lot and gain expertise in the relevant field in this project.
