### **BRIEF ABOUT HAFNIUM SPONGE:**

C-MET, Hyderabad has established an state of the art extended pilot plant for preparation of hafnium metal sponge starting from zirconium scrub raffinate which is dissolved in nitric acid solution. The process stages involved are hydrometallurgical and pyro-metallurgical processes viz. solvent extraction using organic solvent, ammonia treatment, filtration, drying, calcinations, chlorination, high temperature metallo-thermic reduction, vacuum distillation, etc. The characterization facilities include ICP-OES, ONH Analyzer, C-S Analyzer and XRD system. The operations involved are of continuous type, round the clock going on in three shift operations. Besides, electrical, mechanical and SCADA control system, maintenance of the systems are involved. The scale of operations will be in tonnes in wet area processes while in dry area operations it will be in the scale of 50-100 kg per batch. To maintain and run the plant, it is proposed to recruit temporary man power having relevant qualifications and industry experience preferably in chemical and metallurgical industries. The job wise qualifications and period of experiences have been indicated against each post. The safe handling of the systems are essential for the plant and hence required safety and induction training of the staff will be arranged. Besides, safety and health insurance of all the staff will be taken. The work will provide opportunities for improving technical knowledge, decision making capability and leadership quality. People who want challenging job with lots of opportunities for learning and capability build-up will find the jobs interesting and hence encouraged to apply.
